

SOLVING CHALLENGING LEVEL MEASUREMENT APPLICATIONS

We are a worldwide leading manufacturer of level measurement sensors offering tried & tested solutions for most industries. Our **point level sensors** and **continuous transmitters** can accurately detect bulk goods, powders as well as liquids, pastes and foam.

We help you choose the right sensor from our broad **product portfolio** which includes TDR, contact-free radar, electromechanical lot systems, capacitive sensors, vibration forks and rotary level detectors.

WHY GUIDED RADAR?

Guided wave radar has been a staple in the industry for years. By combining this proven technology with the quality of UWT, the NivoGuide® TDR sits in a class of its own. You can rely on the NivoGuide® sensor range which comes feature packed for the hardest applications, eg reliable in **steam, buildup, foam and interfacing materials**.

Ideal sensor for **liquids**, eg for industries:

- Chemical Industry
- Oil & Gas Industry
- Power Sector
- Petrochemical
- Food & Beverage
- Water & waste water

Multitalent TDR - a perfect choice, especially for LIQUID applications. Discover the reasons why!

Looking for precise and safe level transmitters, designed to deal with difficult process conditions such as a dusty atmosphere, material with a low DK-value, very tall silos or particularly high loads on the probe?

Are you faced with strong surface waves, fixings inside the tank or small tanks you wish to fill right to the top?

Are you handling material in a high temperature, high pressure or steam environment?

Are you confronted with challenges such as Interface Measurement?

Look no further. Our NivoGuide® Level Transmitter will be the perfect choice!
